

EFKE

EFKE KB-25 AND EFKE R-25

KB-25 and R-25 are orthopanachromatically sensitized thin-layer black-white negative films of very fine grain, which properties together with the coinciding grade provide the highest possible edge sharpness. KB-25 and R-25 resolving power is 115 lines per millimetre. These films find their applications particularly in technical and professional photography. Sensitivity of Efke 25 is 14 DIN (20 ASA, ISO 20/14° GOST 18), but by developing in coinciding developers effecting Efkes sensitivity utilization may be even twice increased to 100 ISO.

SPECTRAL SENSITIVITY EFKE KB/R 25
